v113 Would you like to participate in our next study?

We would be glad to ask you once again about the situation of the economy and society in about four years from now. We are interested to see how your opinion might have changed in the next years. This would help us to reach important conclusions about the development of opinions in Germany.

We would therefore be very happy to receive your consent to contact you once again:

113.	<p>Would you like to participate in our next study?</p> <p>We would be glad to ask you once again about the situation of the economy and society in about four years from now. We are interested to see how your opinion might have changed in the next years. This would help us to reach important conclusions about the development of opinions in Germany.</p> <p>We would therefore be very happy to receive your consent to contact you once again:</p> <p><input type="checkbox"/> I agree to be contacted by phone or by mail in the future.</p> <p>My phone number is: _____</p> <p>My email address is: _____</p> <p>We hereby expressly declare that we will not give your phone number or email address to any third party, instead only using it to contact you with regard to the follow up of the current study.</p>

Abstract:

The survey “Expectations Towards Economy and Society” was conducted in the Project A6 “The Legitimation of Inequalities – Structural Conditions of Justice Attitudes over the Life-span” which is part of the Collaborative Research Center (SFB 882) “From Heterogeneities to Inequalities”, approved by the German Research Foundation (DFG). The Project A6 investigates (a) the conditions under which inequalities are perceived as problems of justice and (b) how embedment in different social contexts influences the formation of attitudes to justice across the life course.

We assume that individuals evaluate inequalities in terms of whether they consider them as just and that they hold particular attitudes toward justice because, and as long as, these help them to attain their fundamental goals and to solve the problems that arise through cooperation with other people (cooperative relations). As a result, attitudes on justice are not viewed either as rigidly stable orientations across the life span or as “Sunday best beliefs” i.e. short-lived opinions that are adjusted continuously to fit situational interests. Instead, they are regarded as being shaped by the opportunities for learning and making comparisons in different phases of the life course and different social contexts.

The goal of the project is to use longitudinal survey data to explain why individuals have particular notions of justice. The key aspect is taken to be changes in the social context—particularly households, social networks, or workplaces—in which individuals are embedded across their life course. This is because social contexts offer opportunities to make social comparisons and engage in social learning, processes that are decisive in the formation of particular attitudes to justice. Integrating life course and individual development will make it possible to distinguish psychological mechanisms from the path dependence of institutionalized life courses in the genesis of social inequalities and to analyze their interaction. The project will test this empirically by setting up a special longitudinal panel in which the same individuals will be interviewed three times over an 11-year period.
